Company Description	Lowry is a leading solution provider offering a suite of comprehensive GS1 based solutions. With over 20 systems professionals GS1 certified on staff, Lowry offers turn-key systems implementation utilizing GS1 standards based technologies.
Expanded Description	Lowry Computer Products, a leading solutions provider and systems integrator of wireless, bar code and RFID data collection solutions, has certified its professional services and systems sales staffs as GS1 Solution Partners. As a Certified Solution Partner, Lowry offers a variety of solutions that are tested, proven and ready for use by its customers such as GS1 compliant application software, integrated bar code/RFID mobile computers, bar code printers and professional consulting services. With over 20 Lowry professionals GS1 certified, Lowry offers its customers a fully compliant system that meets global industry and technology standards while gaining significant competitive advantage. The certification by GS1 is a further demonstration of Lowry's commitment to global standards and underlines our intention to provide innovative solutions built around the GS1 framework. As a leading nationwide integrator of wireless, bar code and RFID solutions, Lowry continues to invest in progressive, standards based solutions that provide customers a fast, reliable implementation with the lowest cost of ownership. Targeted at the fresh produce supply chain, Lowry recently announced Secure Visibility - Track & Trace is an inventory management software application built exclusively around GS1 standards. By offering comprehensive traceability capabilities, Lowry's Secure Visibility - Track & Trace leverages GS1 bar code, eCom and EPCglobal RFID standards to facilitate traceable fresh food products while quickly maximizing supply chain cost-savings. Lowry is committed to provide the most complete automated data collection system built on GS1 standards. The GS1 Solution Partner certification is a competitive advantage that allows Lowry to deliver the most comprehensive set of tools available to improve the efficiency, traceability and visibility within the many supply chains that Lowry serves. About Lowry Computer Products Lowry Computer Products is a leading manufacturer, systems integrator, certified GS1 Solutions Partner with over 20 systems professionals GS1 certified and software provider of RFID/EPC products, wireless, bar code and data collection solutions with an install base of several thousand customers. Lowry's end-to-end solutions for food safety traceability, asset management, supply chain visibility, work-in-progress, track and trace, and mandate compliance deliver real ROI for its customers. Lowry also manufactures fully converted, tested and ready-to-use Smart Trac™ labels with Gen 2 inlays as well as automated labeling systems for supply chain, packaging and RFID software applications. Through its 15 U.S. sales offices, 25 service centers and a nationwide network of more than 200 service partners, Lowry provides certified technical support and trusted customer service throughout North America. Company Description
Aaway are the leading global provider of multi-enterprise solutions and infrastructure, serving over 11,000 organizations. Aaway's comprehensive offering includes: B2B, Managed File Transfer, Secure eMail, B2M, Track & Trace, & Validation Services.

Expanded Description
Aaway's Synchrony solutions framework and services deliver competitive advantage by enabling and delivering Collaborative Business Solutions. Synchrony establishes the dynamic connections — within and among enterprises — that make your company easier to do business with. Synchrony lets you manage and control business-critical information in motion and in use — improving value chain efficiency, regulatory compliance and quality of service. Due to governmental regulations, changing market conditions and the fervent needs to gain a competitive edge, there has never been greater demand for transparency, integration and collaboration. Every major enterprise must transform fundamental business processes to become a "collaborative business" enabling interactions inside and outside the enterprise to deliver competitive advantage. Real-time Business Integration Aaway leads the industry with Collaborative Business Solutions that seamlessly integrate software, divisions, employees, customers, partners and regulatory bodies across countries and time zones. Our open, service-oriented solutions span the globe, helping you monitor and manage physical assets, business processes, data and financial information in real time. Now business and IT leaders can seize and capitalize on change as it happens, using our single, efficient, easy-to-use Synchrony™ framework. Think globally with product serialization and Track & Trace. Protect patients & consumers from counterfeit products & produce and keep your supply chain safe with Aaway's innovative Synchrony™ Track & Trace solution. Counterfeiting, diversion and recalls/returns continue to be major concerns for the Pharmaceutical & Food industry. The FDA and several European governments are passing Track & Trace legislation requiring manufacturers to embed unique serialized numbers into their packaging and provide chain of custody information to ensure the safety of the supply chain. Ahead of enactments of regulatory mandates, some leading pharma recognize the ROI potential and have implemented Track & Trace technology on their high risk brands to protect their patients and brand from unauthorized resellers or potential counterfeiters. Aaway's Synchrony Track & Trace solution manages serialized events and master data in an open GS1 standards-based solution. With Track & Trace, you can protect your brand, manage your assets, increase transparency across your supply chain community, and create value from serialization efforts for adaptive patient safety solutions, such as global compliance, product authentication and recall management. Core Technology Synchrony Track & Trace components integrate with existing enterprise resource planning (ERP) systems to help you improve efficiency and visibility into product life cycle tracking, achieve global regulatory compliance, and assure the integrity of your data. Synchrony Event Repository: For businesses seeking to capture and manage events centrally outside of their existing ERP systems, Synchrony Event Repository offers a robust, production-ready way to manage serialized and non-serialized event data across the enterprise. Features include: A standard data model for capturing events Support for EPCglobal I.1.0 published standards Proprietary data extensions for internal use A master data management module A web-based user interface for queries, report generation and system administration Scalability and optimization for large volumes. For organizations requiring integration with 3rd party solutions to capture serialized and non-serialized information, Synchrony Integrator makes it easy by lowering the cost of integration and overall total cost of ownership, and reducing the need for development in backend systems. For business ops personnel who need to use events to trigger alerts for optimal supply chain execution, Synchrony Sentinel enables rapid detection of supply chain issues using events and configurable business rules. Synchrony Sentinel puts events and business process management in a context that is readily understood by system operators and users. Features include: Event monitoring and event-triggered alerts XRF definition and monitoring Operational dashboards to monitoring system or business process health Non-event detection for rapid issue resolution Capture of system changes as audit events for security and SOX compliance Extensive pre-configured, event-based business rules based that can trigger secondary processes or alerts if certain conditions are met Optional Components Aaway Track & Trace also offers Serial Number Management for businesses that need to meet complex serial number generation and allocation needs, this component manages serial numbers centrally to ensure non-regulation across multiple lines or facilities and a Product Authentication Module for companies seeking to detect counterfeiters or diversion in their supply chain

Certified Product Specific Information

9501 101 0000000000

The goal of this program is to establish a neutral source to provide global certification and information about EPC-compliant vendors and products. This program has been developed by the EPCglobal community for the EPCglobal community, to enable more efficient and effective implementation of EPC/RFID technologies.

Benefits For End-Users: The certification program will enable end-users to quickly and more easily identify solution providers offering products and services that comply with EPCglobal Standards.
